REDCLIFF FOR AIR SCHOOL, WHY NOT?

Government Needs Help of Red Cross Society

Campaign to Raise \$3,000,000 Starts November 13th

The Alberta Division of the Red Cross Society has received from the District Officer Commanding M. D. No. 15, a request for socks, sweaters and 2,000 pairs of gloves or mitts, to be supplied to mobilized troops in Alberta. More than 200 branches of volunteer Red Cross workers have received their instructions for meeting this call and are now working on the emergency order. Working in co-operation with them are numerous independent groups of women in church and other societies.

The first move is just a "try cut" for the thousands of enthusiastic Alberta workers who have volunteered to aid in maintaining Red Cross records during the present war period.

Organized to furnish volunteer aid to the sick and wounded of armies in times of war, and in times of peace or war to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world, the society has done a remarkable service.

During the last war the Canadian Society received over \$30,000,000 in goods and cash for the people of Canada. It sent overseas 341,325 cases of supplies of which 147,270 were for hospital units in England. In addition assistance was given to France and others of the allies.

As an auxiliary to the Canadian Army Medical Corps it built and equipped a number of hospitals for Canadian wounded, contributed recreation rooms, special chest wards and gymnasiums, Canadian hospitals in England and France and issued supplies to Canadian hospitals in addition to extra comfort supplies to individual patients through the Information Bureau and Prisoners Department. It also provided rest homes for nurses and provided and maintained ambulances in both France and England.

By its charter the society of Canada is constituted the official channel through which voluntary gifts shall reach the department it is organized to deal with the collection and distribution of field comforts. The Dominion government has intimated that it will need Red Cross assistance in the present war along the lines rendered by the society in the last war.

On November 13 a Dominion-wide campaign will be opened to raise Red Cross funds to meet the society's needs in the present war emergency. The goal set by the National Executive for this campaign is \$3,000,000, of which Alberta's allocation will be \$150,000. Joint chairman in the Alberta campaign will be Mr. W. J. Dick, of Edmonton, for the north and Meyer Andrew Davison, Calgary, for the south.

Church Entertains Mothers, Babies

Gordon Memorial, Cradle Roll Babies Hold Annual Party

On Wednesday, Oct. 11th the Annual Cradle Roll Party took place at the Gordon Memorial Church. The day being ideal the mothers and babies came from all directions, all smiling and gay as this was entirely their special day as honored guests of the Church.

The advancement which the children had made during the year, was quite evident and goes to show the grand work of attentive mothers and of our Well Baby Clinic.

The meeting was opened by a short devotional period by the Superintendent, Mrs. Bamforth, who read to the mothers the Parable of the Talents, afterwards applying it to the mothers' job of caring for the children.

Mrs. Palmer sang a beautiful solo and Mr. Ellison gave an interesting address to the mothers along with a few timely jokes.

A contest then brought out the guessing powers of the competitors, with Mrs. Sellhorn carrying off first prize and Mrs. Palman, second.

A delectable lunch was served and all departed feeling that another wonderful day had gone into history and the mothers and babies are looking forward to another year.

Redcliff Has All Climatic And Topographical Advantages For Air School

ATTENTION OF OTTAWA SHOULD BE DRAWN TO THESE FACTS

Ottawa, Oct. 16.—The climatic and topographical advantages of the Southern prairies especially southern Alberta are likely to prove the deciding factor in the location of the landing fields, aerodromes and billets for the Empire air force training scheme, it was learned today.

The level prairie and the fact that no blasting, grading or clearing has normally to be done, combined with the light snow fall in winter will result in the location of numerous projects in Southern Alberta. It is informally estimated that between 25 and 30 such training units might be established in Southern Alberta alone.

As a result of the above despatch from Ottawa, the Review understands that Calgary, Lethbridge and Medicine Hat have made representations to Ottawa that Air training schools should be established in these prospective centres as they claim they have all the requirements necessary.

What about Redcliff as a centre for an Air Training School? We have the same climatic advantages as have the other places mentioned and as for our topographical advantages, God knows that as far as the eye can reach in practically all directions from this town, the bald headed prairie stretches in limitless unbroken acres, an ideal landing field for any number of Air Training Schools. But does Ottawa know? That's the question.

Redcliff is an ideal centre for an Air school. Not only because of climatic and topographical advantages but because in times of war, industries pertaining to defense, should not be concentrated at the larger centres, but rather should be scattered at less important commercial centres for their own protection and safety.

It is the opinion of the Review that the matter of Redcliff's outstanding suitability as an Air Training School location should be brought to the attention of the proper authorities at the earliest possible moment.

Scout Doings At Home And Abroad

SCOUT NEWS

Blind Scouts Quality In First Aid

Nine blind Scouts of the Boy Scout Troop of the Halifax School for the Blind have passed their Scout Ambulance Man and Junior St. John Ambulance certificate tests. A picture in the Halifax Mail showed the blind lads giving a demonstration of artificial respiration.

BOY SCOUTS NOW BANNED IN POLAND

One of the tragedies of Poland was the prompt wiping out by Hitler and Stalin of its Boy Scout organization, numbering 130,541 boys and leaders. Poland has always sent strong contingents to World Boy Scout and Rover Scout gatherings, including the 3rd World Rover Moot, held last July in Scotland. Hitler previously had banned Scouting in his own country, then in Austria and Czechoslovakia. Mussolini did the same in Italy, notwithstanding the strong support of Scouting by His Holiness the Pope. The dictators' objection to the Scout movement is its code of international youth friendliness.

P.E.I. LIEUT. GOVERNOR'S TRIBUTE TO BOY SCOUT TRAINING

The Boy Scouts have enlisted my interest because I am convinced that the outdoor life and training, with its lessons in discipline, service, courtesy and little acts of human kindness which these young minds receive, cannot fail to produce the highest type of manhood. I like the Scout Promise. There is something about it that inspires one with confidence and courage every time you hear it repeated. I for one believe that these boys will develop into men who will carry our civilization to the highest point it has ever reached.

ENGLISH SCOUTS FIND NOVEL WARTIME GOOD TURNS

The practical value of Boy Scout training in circumstances is being widely demonstrated in Britain under the stress of modern war conditions. Scouts of one county organized a district team to disinfect gas masks for civilians.

A team of men from another county centre they are in charge of the distribution of blankets.

In a northern village Scouts were called upon to clean out a number of barns for emergency use by evacuees.

In another town Scouts scrubbed out a number of vacant houses, chopped fire wood for the emergency tenants and helped in other ways to make them comfortable.

The master of a steamer in the roads sent out a request for a Scout to come aboard and teach Semaphore signalling to his crew. The Scout was supplied.

In a city district a special Scout team stands ready to guide people through blackout darkened streets, while others carry individual warnings of air raids to flats of deaf people.

Reports are not without their humorous items. In one district Scouts worked hard and long filling straw palisades, brewing cocoa and digging sanitary pits in readiness for an expected trainload of evacuees. These failed to arrive, so the Scouts emptied the palisades, filled in the pits and drank the cocoa.

MILITIA RECRUITS WANTED

The Armouries at Redcliff will be open on Monday and Wednesday nights for the purpose of enlisting recruits into "O" Company of the 1st S. A. R. Militia.

Here is an opportunity for all men between the ages of 18 and 45 to brush up if they have had previous military training, and to train in military duties if previous training is lacking.

Men enlisting in this unit are not required to serve overseas unless further contingents are to be sent. In this case re-enlistment will be necessary and of course will be on a voluntary basis. Recruits into the Militia at this time could be called upon for home defence if an emergency arose.

Once the unit is recruited up to strength, courses will be held for R. C. O's which will be conducted in such a manner as to acquaint everyone with the latest military practices and tactics.

It is felt that there are many men in Redcliff who will welcome this opportunity of preparing to do their bit for the Empire providing they are called upon to do so. Here is the opportunity to at least start in that direction and every effort will be made to see that each recruit is properly trained and given an opportunity to qualify according to his ability.

On Tuesdays and Thursdays training classes will be held at the Medicine Hat Armouries. Redcliff men will be transported to the list on these evenings to take advantage of these opportunities for training. There are still openings for more recruits at the Redcliff unit.

J. B. Mackenzie, Acting Captain.
"O" Coy. 1st S. A. R. Redcliff.

Victoria, Canada's Evergreen Playground Calls to Country's Sports Loving People

The Empress Hotel, centre of Canada's famed Evergreen Playground where summer sports continue in full swing throughout the winter, is on the threshold of the best season in its history. According to reports from Canadian Pacific sources in Canada and the United States.

There are several reasons for the promise of greatly increased travel to beautiful Vancouver Island but the most important one at the moment seems to be that international exchange facilities, brought about by the war, make each dollar worth ten cents all over the continent; Christmas more in Canada than it is in the United States.

The West Coast has many attractions for the traveller who likes his winter without more froshes all year round; riding, golf, tennis, swimming, fishing and lawn bowling continue throughout the winter. The Mid Winter Golf Tournament, from March 1 to 5, is an annual event which attracts enthusiasts from all over the continent; Christmas at the Empress is a celebration complete with bear's head, yule log, wassail bowl and carols, with a novel after-dinner social given out on the open lawn.

The contrast offered by Victoria is really amazing, especially after a train ride across the country. From the windows of the warm train the traveller will see typical Canadian winter scenery, and then Victoria with its flowers, its magnificent weather, and its year-round golf and other summer sports.

The Problems Of War

The war in which Canada is currently engaged as an active participant may be expected to last, at least temporarily, some of the problems which have already arisen in the past few years. On the other hand, it may serve to accentuate some problems later on, if not now.

It is apparent, for instance, that in a war of even moderate duration, a wide scale relief problem is destined to vanish for the time being. Certainly, with the demand for man power for the fighting forces, for scientific and industrial and to some extent for augmented agricultural effort, there should be none left in the urban centres, except those who would normally be unmengaged by violent or advanced social or political movements. Even some of the latter will, no doubt, find it possible to make some contributions towards their own support under war conditions.

In the rural districts, which will be called upon to supply allied belligerents with large quantities of foodstuffs, a widespread relief problem is almost inevitable while the war is in progress, except where such condition may be induced by complete crop failure over a wide area—a condition which it is hoped will not recur in the lifetime of the present generation. Even, however, if crop failures should occur as a result of drought or from any other cause, it is a reasonable assumption that many resourceful country residents would be able to find some more or less remunerative occupation in the larger centres, opportunities afforded because of the existence of a state of war.

The Railway Problem

The war, too, may be expected to some extent to ameliorate the national railway problem. In Canada it is to fulfil one of her principal missions in the war she will not only provide the allied fighting forces and their nations with large quantities of food, but also substantial supplies of arms, munitions, aeroplanes and possibly even bottoms, as well as raw materials for the processing of goods and other commodities of the country.

The transportation of such raw materials and finished commodities may reasonably be expected to furnish the railways with a very material increase in tonnage to the full extent of their capacity, and this just as long as the allied navies are able to keep the sea lanes between this continent and Europe open. Hence, as long as the war is in progress, a big increase in railway earnings may be expected with a corresponding shrinkage in deficits.

The war may also be expected speedily to terminate the expenditure of considerable sums of money on public works of the type now still being authorized by the federal government as unemployment relief measures. Not only should there be no unemployed requiring assistance in this or any other form, but the moneys now being used for this purpose will undoubtedly be required for the prosecution of the war.

Sacrifice In Prospect

While the sharp current of opinion is running in the direction of these irritating problems may be anticipated for the duration of the struggle overseas, the other side of the picture should be destined to show some losses, temporarily at least.

For example, there is little doubt that the war will bring a halt to the demand for larger expenditures for social reform, not only because the money which might have been allocated for such schemes under happier auspices, will be required for the vigorous prosecution of the war, but also because improved economic conditions will reduce, to some extent the necessity for such expenditures. In this category may be placed such social projects as state hospitals and medical care, extension of the old age pension plan and others of that type.

It is even possible that the exigencies of a prolonged war may, in course of time, necessitate reduction in expenditures for such highly essential services as education and public health, a contingency which, it is devoutly to be hoped, can be avoided. One of the surest ways of avoiding such a misfortune is to prosecute the war with such vigor and strength and unity of purpose and with all the available resources, that it will be brought to a speedy conclusion as possible.

There are many cherished schemes, existent and potential, which may have to be sacrificed or curtailed before the war is over, but the need certainly will to reduce these sacrifices to a minimum to make the prosecution of the war the matter of greatest concern, and that, in turn, signifies the least expenditure on the part of every citizen of the country. There is no one who cannot make some contribution towards a speedy termination of the war. Until the war is over, the social and economic progress of the country on a sound basis is bound to be hampered and delayed.

Lighting Glass

Ingenious Lighting Scheme Has Been Introduced In France

In Europe much of the engineering ingenuity of the nations is currently devoted to the devising of ways and means to protect cities from the ravages of air raids.

One of the first rules of self preservation in the event of night air raids is that there should be no visible light emanating from buildings in France a rule not so ingenious lighting scheme has been devised to light night-time bombers. It consists merely of a combination of blue glass windows and orange lamps.

When the correct degrees of coloring are attained, the rays of the orange lamps do not effectively pass through the blue window panes, and are thus invisible to aircraft at night. The blue windows will pass about 75 per cent. of the incident sunlight by day—Branston Sun.

Will Serve Without Pay

Approximately 100 men have sent offers to the Voluntary Reserve Registration Bureau, Ottawa, to serve without remuneration in any capacity in which the government might need their services, the Bureau revealed. One man who recently received a \$50,000-a-year executive job is ready to serve on a dollar-a-year basis.

If small indentations are counted, Maine has more than twice as much coastline as Florida.

Turtle racing is popular in Maidstone, England, a ten-yard race lasting about an hour.

Noted Scientist

Professor Sigismund Freud Dies At His Home In England

Professor Sigismund Freud, 83, famed originator of psycho-analysis, died at his home, London, England, recently. Freud left Vienna and came to England after German annexation of Austria last year.

The aging scientist arrived in London June 6, 1938, in search of "peace, study and work." "I am looking forward to my future life with my students, my books and my studies in England," he said. They let me bring some things from the study and my own personal books and papers. Everything else—all my money and my property in Vienna—is gone.

With him when he came to England were his wife and their daughter, Anna, his son Ernst and his nephew, Harry Freud. The Jewish scientist was the first prominent Jew allowed to leave Austria after the German annexation.

At the time of his death, Dr. Freud, whose researches in the influence of sex on behavior won him world-wide fame, still was working on the book in which he intended to show how the Bible reflected the subconscious yearnings and fears of the peoples of antiquity.

In Working Long Hours

But Britain's Prime Minister Appears Healthier Under Strain

Prime Minister Neville Chamberlain, working harder in his 71st year than ever before, seems to be healthier and happier under the strain of war.

He seems to have new strength, a more youthful vigor. He walks with a light step and almost with a military air.

When Chamberlain speaks to Commons, his voice carries to every part of the House.

He works at least 16 hours a day, but still manages to carry out much of his peace-time routine.

Always an early riser, one of his morning routines is to look at the flowers and birds in his garden before breakfast. Then he and Mrs. Chamberlain take their morning stroll in the nearby park. And, best of all, his friends say, his gout has vanished.

Awarded Baly Medal

Dr. C. H. Best Of Toronto First Canadian To Receive It

The first Canadian to be so honored, Dr. C. H. Best, head of the Department of Physiology in the University of Toronto, has been awarded the Baly Medal by the Royal College of Physicians of England, an award made every alternate year to the person deemed to have most distinguished himself in physiology.

The medal, of the value of \$100, is customarily presented on the occasion of the Harvard Oration on October 18, and Dr. Best was invited to be present.

Dr. Best has also been awarded the John Maltett Purser Lectureship by the medical faculty of Trinity College, Dublin, and hopes to be able to deliver the lecture a little later.

One-Armed Man Clever

One-armed George Martin of Oshington, England, can use a wheelbarrow and motor mower, dig, cut turf, prune hedges, fell trees, drive a three-horse team and catch four bricks at a time. Martin also plays golf, cricket and billiards, and is a good shot.

Message From Queen Mary

Expresses Admiration For Wonderful Spirit Of British Women

Queen Mary issued a message from Marlborough House expressing admiration for the "wonderful spirit" with which British women are meeting wartime emergencies and difficulties.

Her message read: "I wish to express my admiration at the way in which our countrywomen have come forward in thousands to give help in the present emergency. The Queen, my dear daughter-in-law, has told me of the wonderful spirit shown all sides, of which she has found ample proof in her visits to various centres."

I wish to send a special greeting to all nurses, more particularly those belonging to the services of which I am president—Queen Alexandra's Royal Naval Nursing Service and the Territorial Army Nursing Service.

I know that they will carry out their arduous duties in the splendid tradition of those services and I would like them to know that they have my good wishes wherever they may be.

At the same time, my daughter, the Princess Royal, asks me to join with her in sending greetings to all the men and women of the Royal Air Force Nursing Service.

I am mindful also of the invaluable work of the Queen's nurses, who are exceptionally busy now in the reception areas. It is my constant prayer that God's blessing may give the marvellous work of all nurses throughout the empire.

Rates A Little Lower

Northern Papers Favored On News, Papers And Periodicals Sent

By Air

A reduction in air mail rates on newspapers and periodicals to and from distant northern points was announced by Postmaster-General Norman L. McArthur.

The new rates, now effective, will affect distant settlements and mining camps in the Northwest Territories, British Columbia, Alberta, Saskatchewan, Manitoba and Ontario. Telegraph Creek, B.C., will be eligible for the reduction in winter only, the announcement said.

When mailed by the public, second class matter may be sent to such points at the rate of one cent for each four ounces or fraction of four ounces. Posted from the office of publication or publishers, the rate will be four cents a pound.

The regular air mail postage requires six cents for the first ounce and five cents for each additional ounce.

Lady (viewing pompous gentleman): "He's a baronet, eh? How did he get his baronetcy?"

Friend: "Tolerance."

Lady: "How many coupons?"

War And Science

Many Advances In Human Knowledge May Be Expected

Every one is asking the question these days: What will be the effect of the war on this and that? What, for example, will be the effect of the war on science? Part of the answer to that question lies in the past. What was the effect of the World War on the science of that day?

War in 1914-1918 increased the importance of science. In some respects, of course, the activities of science were inimical to human beings. This was especially true of the activities of science in Europe.

In Germany great strides were made in chemistry, but it was partly the chemistry of poisonous gases. There was, however, the chemistry of synthetic, and German scientists developed a great many usable substitutes for the raw materials that could not get on account of the Allied blockade.

But not only chemistry benefited by the World War. British and French scientists made great strides in the development of the physical sciences of radio and aviation. And surgeons behind the lines everywhere added to their knowledge of human physiology and their skill in patching up casualties.

All of these advances, however, were not exactly pleasant to behold, for they were made at the expense of a torn and bleeding humanity.

It is not until now turns to the history of science in America during the War that one finds such joy in the picture. American scientists of that day kept themselves informed what was going on in darkened Europe, and at the same time devoted their energies to carrying out those developments that would bring permanent good for all mankind.

In that experience, then, there is an approximation of what the effect of this war will be on modern science. There will be advances in Europe at Americans' expense. America will carry the torch of pure research—Winthrop Free Press.

No white man ever saw one of New Zealand's strange big birds, the moa, which died out centuries ago.

Rust and corrosion cause an annual loss of about \$100 million caused by fire and flood combined.

The Weeping Willow

Interesting Story Relates That Tree Came Originally From Smyrna

The weeping willow is an exotic in Canada. Coming to the North American continent from the east through the agency of the English poet, Alexander Pope, states George A. Stearns, son, gardener at the Dominion Experimental Station at Rotham, Sask.

The story goes that Pope was present when the tree was being taken off a box of fruit shipped to England from Smyrna and observed that one of the stiches appeared as if it contained some life. He planted it in the hope that it would grow into a young British officer brought from Smyrna and observed that one of the stiches appeared as if it contained some life. He planted it in the hope that it would grow into a young British officer brought from Smyrna and observed that one of the stiches appeared as if it contained some life. He planted it in the hope that it would grow into a young British officer brought from Smyrna and observed that one of the stiches appeared as if it contained some life.

Limit Of Air Speed

For Military Aircraft 600 Miles Per Hour Is Set By Experts

A 600 mile-an-hour speed limit for military aircraft was set by an expert at the British Association meeting at Dundee.

The expert is Mr. H. E. Wimperis, director of scientific research at the Air Ministry from 1925 to 1937 and president of the engineering section of the meeting.

A definite limit was being imposed by the laws of nature, he said. If rapid manoeuvre was required then the speed must be controlled to suit the conditions.

In regard to civil air services, Mr. Wimperis said that there were good economic reasons for speed to settle down in the 200 to 300 miles an hour range.

A new amusement device gives patrons the feeling of going over the Niagara Falls. Others get the same sensation by interviewing their bank managers.

PREPARE FOR BIG TOURIST SEASON

Alberta should prepare for a big increase in tourist traffic in
1940, it appears from reports from various sources.

This was brought out at the recent convention of associated
boards of trade, held at Radisson, B.C. where Alberta was re-
presented by its director of publicity, D.R.C. Campbell. The meet-
ing discussed the opening of the Big Bend highway, between Golden
and Revelstoke, B.C. in June of next year.

Consensus of opinion appeared to be that the Circle route, which
includes Alberta, will see a big gain in tourist traffic next season.
It is expected that tourists will pour into this province from the
United States.

This situation, and its possibilities, is expected to be discussed
at annual meetings of Alberta Motor Association branches to be
held next month. In all likelihood these branches will make
strong representations to the provincial and federal governments
as to the need of making adequate preparations to take care of the
tourist rush to this province next year.

WARN MOTORISTS OF DEADLY POISON

This is a dangerous period of the year for motorists, particularly
on account of the possibilities of carbon monoxide poisoning, it is
pointed out by the officials of the Alberta Motor Association.
Each season, upon the advent of colder weather, this deadly
poison takes its toll of drivers in Alberta and other parts of the
country.

Every possible care should be taken to avoid the deadly effects
of this gas, it is emphasized by officials.

Drivers who know of the dangers make certain that defects in
equipment are checked over carefully and everything possible is
done to forestall the circulating of carbon monoxide. Also it is
necessary to make certain that a window is kept open in the car
and fresh air assured.

At this time of the season there is a tendency to keep all car
windows closed. Particularly when starting the car it is advis-
able to have windows open.

Officials of the A. M. A. are determined to bring the carbon
oxide toll to a minimum in Alberta this year, if it is possible.

ANNUAL HALLOWEEN SUPPER

The Senior W. A. of St. Am-

lrose Church are holding their

Annual Halloween Supper in
